

The Importance of
SSL Certification

What is an SSL Certificate & Why do I require to add it on my website?

Secure Socket Layer (SSL) is an encryption technology that encrypts connection between your website and your visitors, so hackers can't steal data as it's being sent between two devices over the world wide web.

An SSL Certificate also verifies the authenticity of your website that your visitors can trust.

Furthermore, Google will begin flagging websites with no SSL Certificate installed and display a "Not Secure" message in the address bar. When the SSL Certificate is installed on your website, a green padlock is displayed in the address bar.

How STAAH will assist you in adding an SSL certification on your website hosted by STAAH?

As your technology partner we want your website to be secure and on top of search results.

Potentially you could be missing on direct bookings if your website is not secure.

You require to fill up the link confirming that STAAH will add SSL certification to your website.

<https://www.staah.com/SSLCertificateSignup.htm>
